Description

Further work is in progress, for now the kernel boots and the rootfs mounts.

This was tested with TL-WR1043ND Ver:1.8, but I expect all 1.x should work.

Many thanks to Adrian Chadd and Alexandr Rybalko for the kind help with this
board definition, which is mostly based on Adrian's work on:
http://code.google.com/p/freebsd-wifi-build/wiki/TpLinkTLWR1043ND
