Description			
Converters gzip and bzip2 should pack with highest compression level by default, because LooX: "it's embedded.. any byte counts"			
patch appended

patch appended

It is not a good idea, since it will take much longer on build and a bit longer on boot. We have CONVERTER_BZ2_FLAGS and CONVERTER_GZ_FLAGS for peoples who want to use other than default values. It even possible to set in on build start (since we initialize it with ?=) make TARGE_PAIR=... CONVERTER_GZ_FLAGS="--stdout -9"

Will not close yet the PR for now, maybe someone show better argument than me.

#2 - 01/16/2012 11:55 AM - Oleksandr Rybalko

- Category set to Project
- Status changed from New to Closed

Applied.
